Overview

The purpose of this document is to provide users with a high level of how the Adversarial Evaluation Genuineness Intelligence System (AEGIS) application works. It will cover both the user side, as well as the administrative side of the application. Readers should read the sections that are relevant to them.

Intended Audience

AEGIS is a technical assessment platform. It is therefore intended for job applicants who need to be assessed in the interview process, as well as recruiters who are reviewing these candidates. What distinguishes AEGIS from traditional assessment platforms is the weaponizing of AI to prove the genuineness of the candidates' responses.

Candidates:

- Complete technical assessments assigned by recruiters
- Interacts with assessments populated with adversarial questions

Recruiters:

- Manages assessments. This includes the creation, deletion and assignment of assessments
- Weaponises questions: The recruiters choose adversarial techniques to apply to a question.

Scope

This user manual goes over the following:

- The application's feature set
- Troubleshooting steps to take when problems are encountered
- Frequently Asked Questions

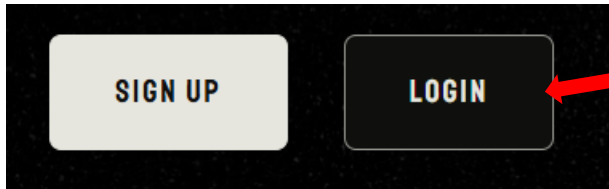

Getting Started

Candidates:

- Sign up: When a candidate is new to the platform, they can choose to sign in via Google or manually create an account with AEGIS. The manual creation process involves providing an email address and creating a secure password.

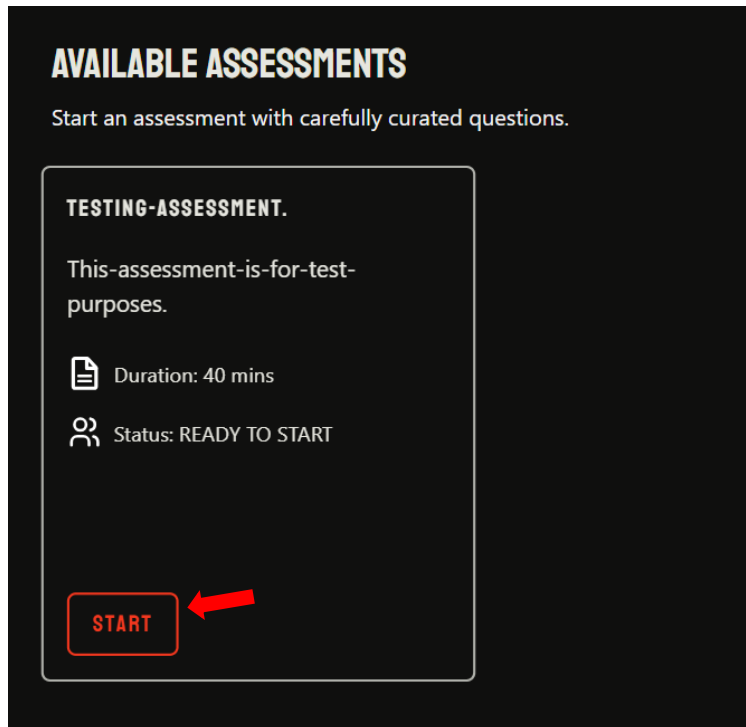

- Login: A returning candidate can log in using the method they used to sign up. Google sign up users log in using Google, and AEGIS sign up users log in manually with their email and password.

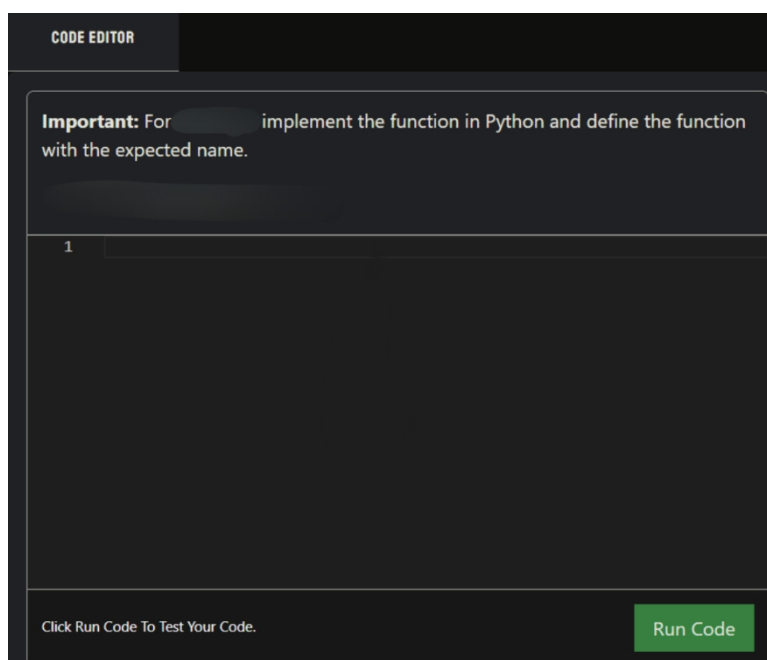

Features

This section will cover the features available to each type of user.

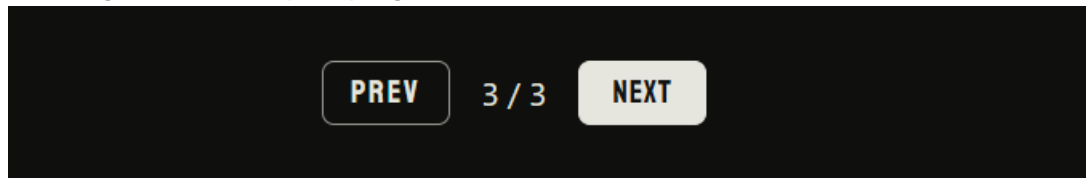

- Starting an assessment: Candidates can only see and complete assessments assigned to them by a recruiter. A recruiter will send a link to the assessment, and the system will verify the user's access upon logging into AEGIS.

- Answering coding questions: Candidates will be asked to complete a coding type question. This can vary in difficulty and structure based on what the recruiter assigns and chooses a code runner is provided in the platform to test solutions

- Answering multiple choice questions.
- Answering fill in the blank type questions.
- Autosaving: AEGIS provides progress checkpoints while a candidate is completing an assessment. Should a candidate leave the assessment voluntarily or involuntarily, they can continue the assessment from where they left off. Note: *This is only applicable if the candidate continues within the allocated time for the assessment.*
- Pressing “Next” saves your progress

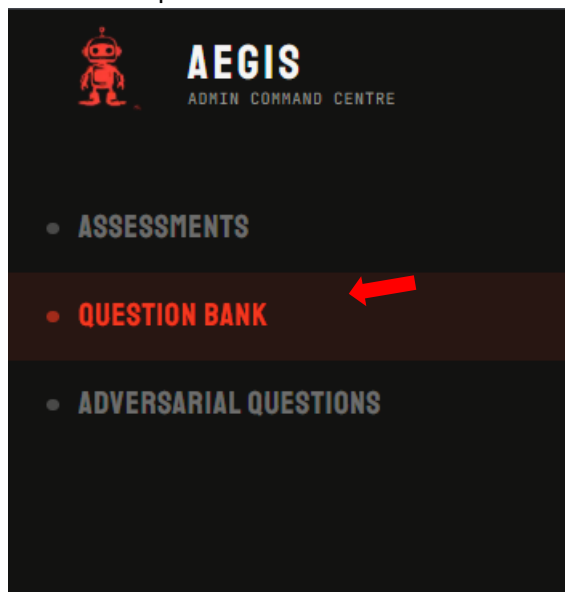

- Submitting: Candidates can submit the assessment once they are satisfied with their responses. *Failure to submit the assessment within the given time will result in an auto submission.*

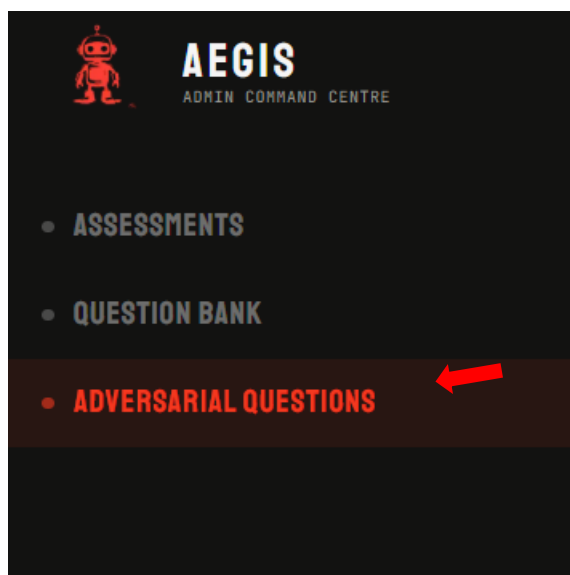

Recruiters:

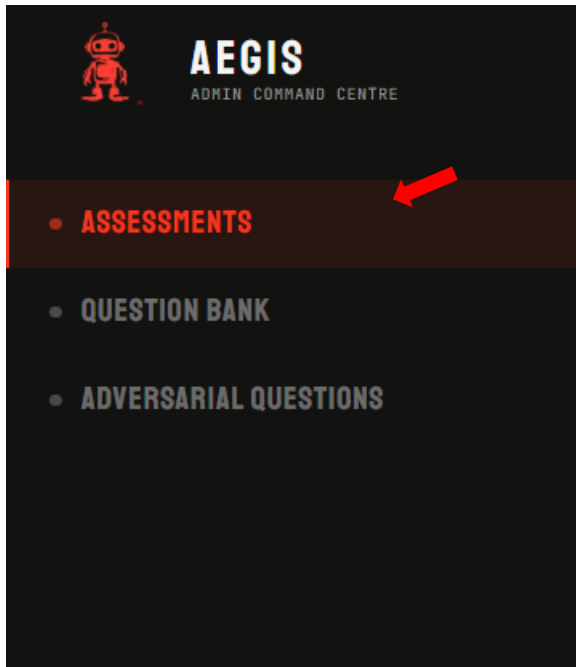

- Manage questions: A recruiter can create a new source question, edit existing questions and delete questions.

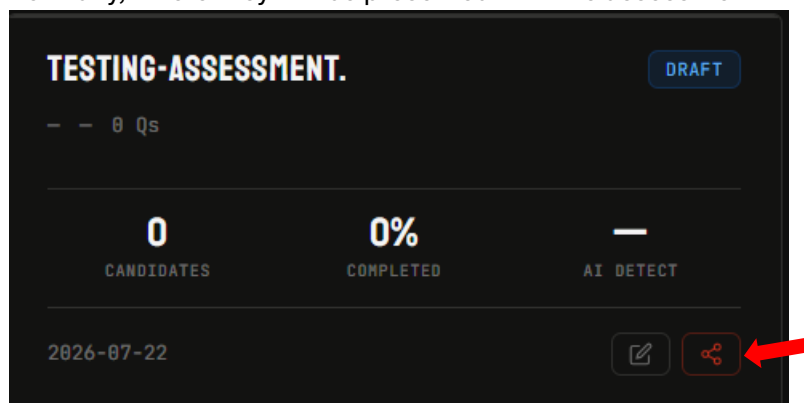

- Weaponise questions: Recruiters can *weaponise* questions. This is the essence of AEGIS. Questions are weaponised so the platform can detect the likelihood of a candidate using AI to answer questions, as compared to attempting to answer questions using their own knowledge and skills. Candidates who are suspected to have used AI in answering assessment questions will be flagged, and recruiters can take further action.

- Create assessments: Recruiters can create assessments by populating them with questions of their choice. The questions can be a mixture of original source questions as well as adversarial questions. Candidates are not given information on which questions are weaponised. Recruiters can also specify the category and difficulty of the assessment, and created assessments will be saved and available for future reuse.

- Assign assessments: Available assessments can then be assigned to a candidate. Recruiters select the candidate's email address, and an access token will be associated with the candidate. A candidate can then use the link to start the assessment or login normally, where they will be presented with the assessment.

Troubleshooting

Candidates:

“I can’t see my assessment.”

- Confirm that you logged in using the same account (Google or email) that you received the recruiter’s invite from.
- Check the expiration date of the assessment on the recruiter's email.
- If you received a direct link, try using that link rather than navigating manually.

“My progress didn’t save/ autosave didn’t restore my answers”

- Autosave only restores your progress if you return within the allocated time window for the assessment. Once the time window expires, your last checkpoint will not be recovered. The assessment automatically submits with the last checkpoint after the time window expires.

“I was logged out / disconnected during my assessment.”

- Login again using your original sign up method. If you’re still within the time window, your progress will be restored from the last checkpoint.

“I missed the submission deadline”

- The assessment will automatically submit whatever work was completed when the time runs out.

Recruiters:

“A candidate says they can’t access their assessment”

- Check if you selected the right candidate’s email address
- Confirm the assessment’s time window hasn’t already expired.
- Resend the access link if necessary

“I can’t tell if a question is weaponised once it’s in an assessment.”

- Good. Candidates and recruiters shouldn’t see the difference. If you want to tell, go to the adversarial questions tab and search for the question there.

“An assessment I created isn’t showing up for reuse.”

- Confirm that you’re filtering by the correct category or difficulty in the assessment list.

FAQ

Candidates:

Q: Do I need to create an AEGIS account, or can I use Google? You can sign up manually with an email and password, or use Google sign in. When you log back in, you must use the method you originally used to sign up

Q: What happens if I lose my internet connection mid-assessment? A: Your progress is checkpointed automatically. If you return within the assessment's time window, you can pick up where you left off.

Q: What question types will I encounter? A: Coding questions, multiple choice, and fill in the blank questions. The specific questions depend on what your recruiter assigns.

Q: Can I resubmit after the time runs out? A: No. The system automatically submits whatever you've completed when the time window closes

Recruiters:

Q: What does weaponising a question actually do? A: It applies adversarial techniques to a source question so the platform can assess whether a candidate's response shows signs of AI assistance versus genuine answers.

Q: Can I reuse an assessment I've already created? A: Yes. Assessments are saved after creation and can be reassigned to different candidates later.

Q: How do I assign an assessment to a candidate? A: Select the candidate by email address; the system generates an access token tied to that candidate, who can then use the link or log in normally to see it.

Q: What happens if a candidate is flagged for suspected AI use? A: Flagged responses are surfaced for your review, and you can take further action from there (e.g., follow-up review, disqualification)
